

LEAN IMPLEMENTATION SERVICES

Lean is the term coined to describe the manufacturing and organizational process that Toyota and other Japanese manufacturers have used to fundamentally change the automotive industry. These same techniques have now proven just as successful, if not more so, in other industries. At PMC, we offer a wide range of operations engineering and management consulting services, all focused on helping organizations become Lean. We are unique in that our goal is to make sure you never need our services again.

The power to improve lies within your own experts, your people. We will show your people how to look at their processes differently, allowing them to realize their potential. This is where we are unique; we don't profess to be expert in your business, you are! We are expert in process analysis and design, and how to improve them. More importantly, we are expert in leading Lean cultural transformations.

While many manufacturing organizations continue to struggle with Lean transformations, service organizations in general have not benefited from this "new" way of thinking at all. We are here for both. We can help manufacturing organizations institutionalize Lean Thinking. We can help service organizations improve as never before. Our services very quickly pay for themselves. Organizations that make the Lean transformation typically realize better than 50% productivity improvements and 50% reductions in the time required to deliver products and services.

Our Data-Driven Improvement approach ensures verifiable, bottom-line performance improvement results. PMC has extensive expertise in the following areas:

- Standardized Work
- Process/System Simulation
- Value Stream Mapping
- Kaizen Events
- Supplier Development
- Quick Set-up
- Line Balancing
- Workstation Optimization
- Workload Leveling
- Built-in Quality/Error Proofing
- Reduction of Variation (Six Sigma)
- Pull Systems (Kanban)
- Total Preventive Maintenance
- Workplace Design and Ergonomics
- Visual Workplace
- Workplace Organization (5S)

"DATA-DRIVEN IMPROVEMENT"

PMC is a full-service operations engineering and management consulting firm based in Dearborn, Michigan. For over twenty-five years, PMC has been developing the most innovative productivity solutions in the consulting industry. Today's business climate requires managers to anticipate change before it occurs, so we work to make sure our clients are prepared for the adjustments that the competitive environment demands.
